SUMMARY

Computer Science (Software Engineering) student at Binus University with a strong focus on full-stack web development and data management. Proficient in React.js, Laravel, Oracle SQL, and Figma. During my internship at PT Priamanaya Energi, I successfully digitized complex power plant operations by architecting a standalone reporting system, integrating REST APIs, and automating data extraction. I am a highly adaptable and collaborative problem-solver, eager to apply my technical expertise to tackle real-world industry challenges.

LENGUAGE / FRAMEWORK

Java, Python, PHP, Dart, SQL, Oracle SQL, HTML, CSS, React.js, Laravel, Flutter, Jython, Figma.

TOOLS

Figma, Postman, Metabase, Eclipse, SQL Developer, Laragon, BIRT, IBM Maximo, Oracle Database, Antigravity.

PROFESSIONAL EXPERIENCE

Software Engineer Intern | PT Priamanaya Energi **Feb 2026 – Present**

Digitized PLTU operations by building a real-time reporting platform using Laravel and React.js, and automated daily Excel exports via Cron Jobs. Additionally, I integrated IBM Maximo REST APIs for Work Order automation and developed dynamic BIRT reports and a Metabase Geodashboard using Oracle SQL and Jython.

EDUCATION

Bachelor of Computer Science — Software Engineering **Sep 2023 – Present**

Bina Nusantara University, Kota Bekasi

- Data Structure, Machine Learning, Framework Layer Architecture, Software Security, Artificial Intelligence, Database Technology, Code Reengineering, Software Engineer.

ORGANIZATION

TFI Volunteer to Jakarta Recycle Center | Binus University

Visiting the Jakarta Recycle Center to learn about the recycling process and waste management.

Volleyball Activist (2025 – 2026)

help UKM volleyball activities run smoothly.

PROJECT

B-DRAIN (Web-based GIS Geodashboard)

Developed a React.js and Leaflet.js Web GIS Geodashboard to analyze flood-prone areas and drainage infrastructure in Bekasi City. Implemented spatial and proximity analysis, providing stakeholders an interactive tool to prioritize maintenance efforts.

Fake News Detection

FakeNewsDetection is a machine learning project that classifies news articles as fake or real. The system leverages a news dataset with an NLP (Natural Language Processing) model to analyze linguistic patterns in articles and predict their authenticity

PMS — Property Management System

Developed a web-based Property Management System (PMS) using Laravel and React to centralize building operations for PT Priamanaya Energi. The platform features role-based access control, scheduling, asset management, and a ticketing system across the Security, Cleaning, and Engineering departments.

Tripnesia

Developed Tripnesia, an open trip booking platform built with Laravel 11, Bootstrap, and JavaScript. Engineered key features including Midtrans payment integration, automated PDF ticket generation, dynamic destination filtering, and a comprehensive admin dashboard.
